10 **Language and preferences** 12

11 **Account and documents** 13

12 **Diagnostics and support** 14

13 **Troubleshooting** 15

14 **Quick reference** 16

Your first session

01 Install Center from an official channel. **02 Sign in** with your email code. **03 Open Library** and install the instrument. **04 Open your DAW**, rescan if needed and start playing.

This guide covers HRL Center 0.4.27. The English controls match the captured interface. Instrument operation is explained in the individual product manuals.

Click a chapter to jump directly to its page.

01 / GETTING STARTED

Welcome to your studio.

Install Center, choose your language and bring your Home Records Label products together.

Before you begin

A Windows x64 computer, an internet connection and access to your account email. Instrument requirements are listed separately in each product manual.

What Center does

Center manages your product library, installers, licenses and updates. Your DAW runs the instruments; Center does not host or play them.

Install HRL Center

1. Obtain the Windows x64 installer through an official Home Records Label channel. Run the installer and choose the wizard language.
2. Read **About HRL Center**, follow the wizard and choose an installation folder if needed. Complete any Windows permission prompt required by the installer.
3. Open **Start > HRL Center**. A Start menu shortcut is created; a desktop shortcut is not created by default.
4. On the welcome screen, choose **English** for the controls used in this manual. You can change language and theme again in **Settings > General**.

> **Center is free**
>
> Installing Center or creating an account does not purchase PSynth3 or activate a paid instrument. PSynth and PSynth2 are free instruments and use no activation slots.

Know when you need to be online

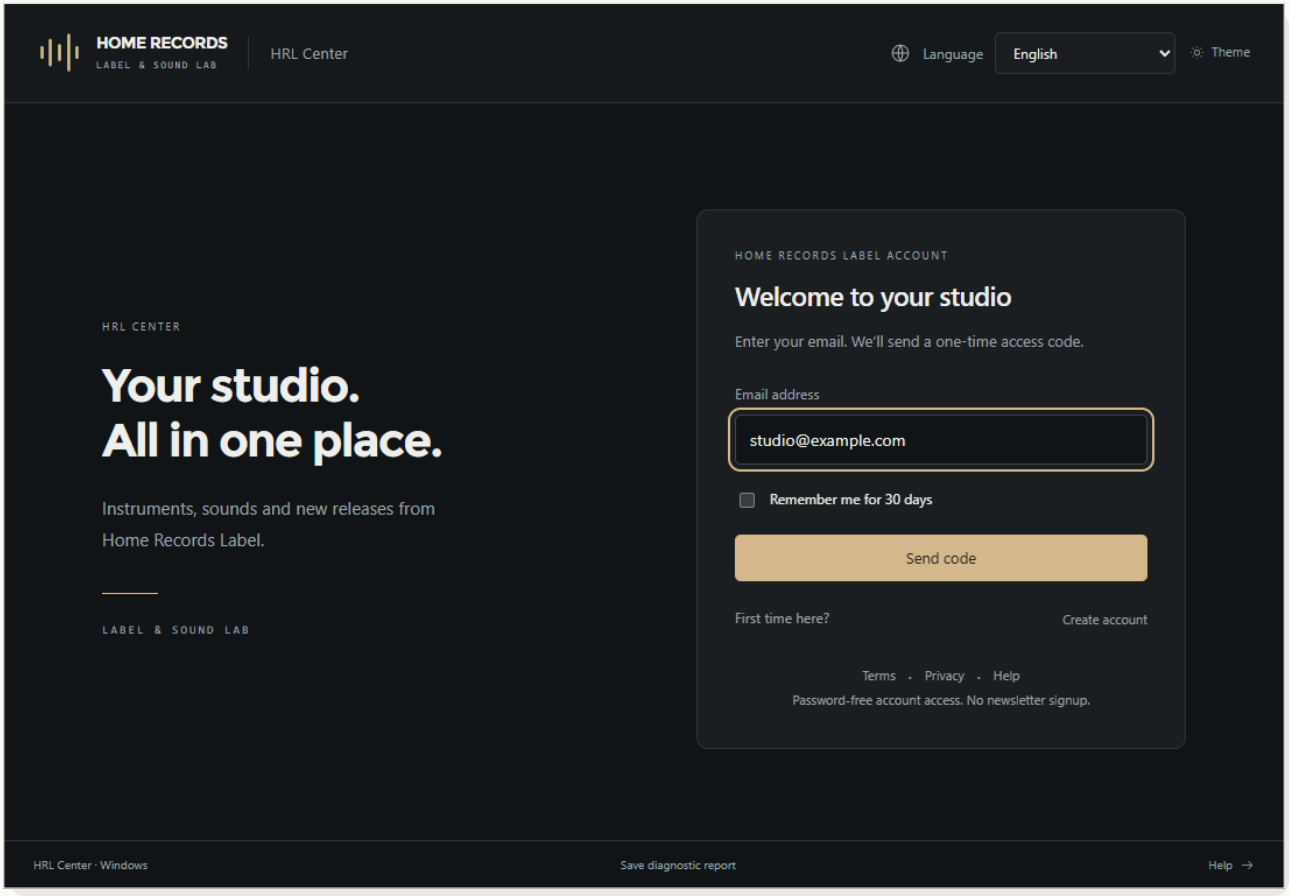

Action	Connection
Sign in, sync your library or add a product code	Internet access and an available account service.
Download, activate or refresh a product license	Internet access and the relevant release or license service.
Use an installed instrument in your DAW	PSynth and PSynth2 need no activation. A valid signed PSynth3 license can work offline.

Availability at this edition: before the joint HRL Center and PSynth3 release, account access is restricted to invited addresses. A missing public installer, catalog entry or update feed is expected while that release stage is closed.

02 / YOUR ACCOUNT

One email. Your library.

Sign in with a single-use email code. Choose Create account only when you need a new account.

01 / The English welcome screen. studio@example.com is an example address.

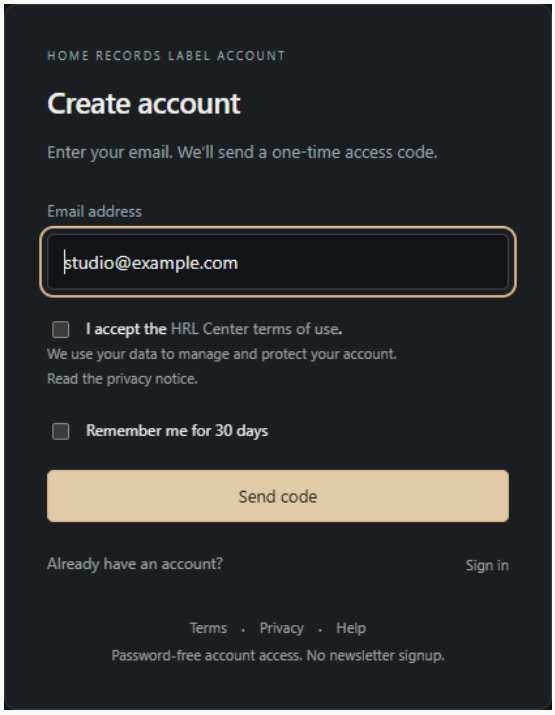

1. For an existing account, enter its email address on the welcome screen. For a new one, select **Create account**, read the terms and privacy information, and explicitly accept the terms.
2. Choose **Remember me** before selecting **Send code**. Use an email inbox you can open on this device or another trusted device.
3. Open the message from Home Records Label. Enter its **8-digit code** in Center and select **Open HRL Center**.

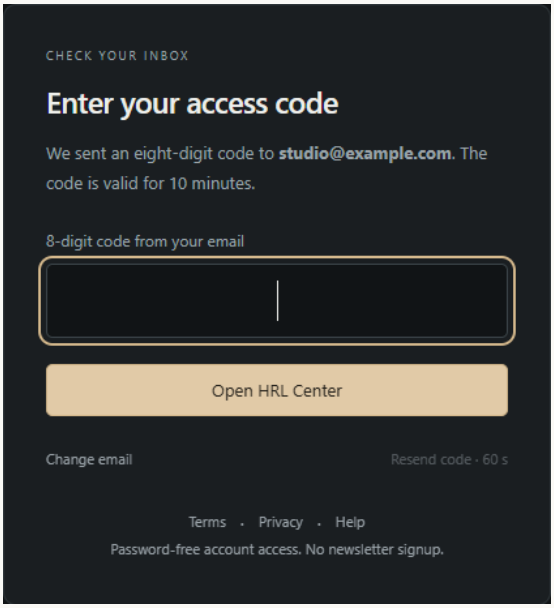

> **Use the right account**
>
> Sign in does not silently create a new account. Center may ask you to switch to Create account or Sign in after verification. For a purchase, use the account that should own the product.

03 / CODES & SESSIONS

Stay in control of access.

Your email code verifies access to the account. Remember me controls how the resulting Center session is stored.

02 / Create account requires explicit acceptance. 03 / Enter the code delivered to your inbox.

Remember me off / up to 8 hours

The new session stays in the running Center process and ends when the app quits. Closing to the tray keeps that process running.

Remember me on / up to 30 days

Center may save a protected session for this Windows user. You can return without a new code while the session remains valid.

Both session limits are absolute: activity does not extend them. Existing or older sessions may need a fresh code sign-in before a different Remember me choice applies.

If the code does not arrive

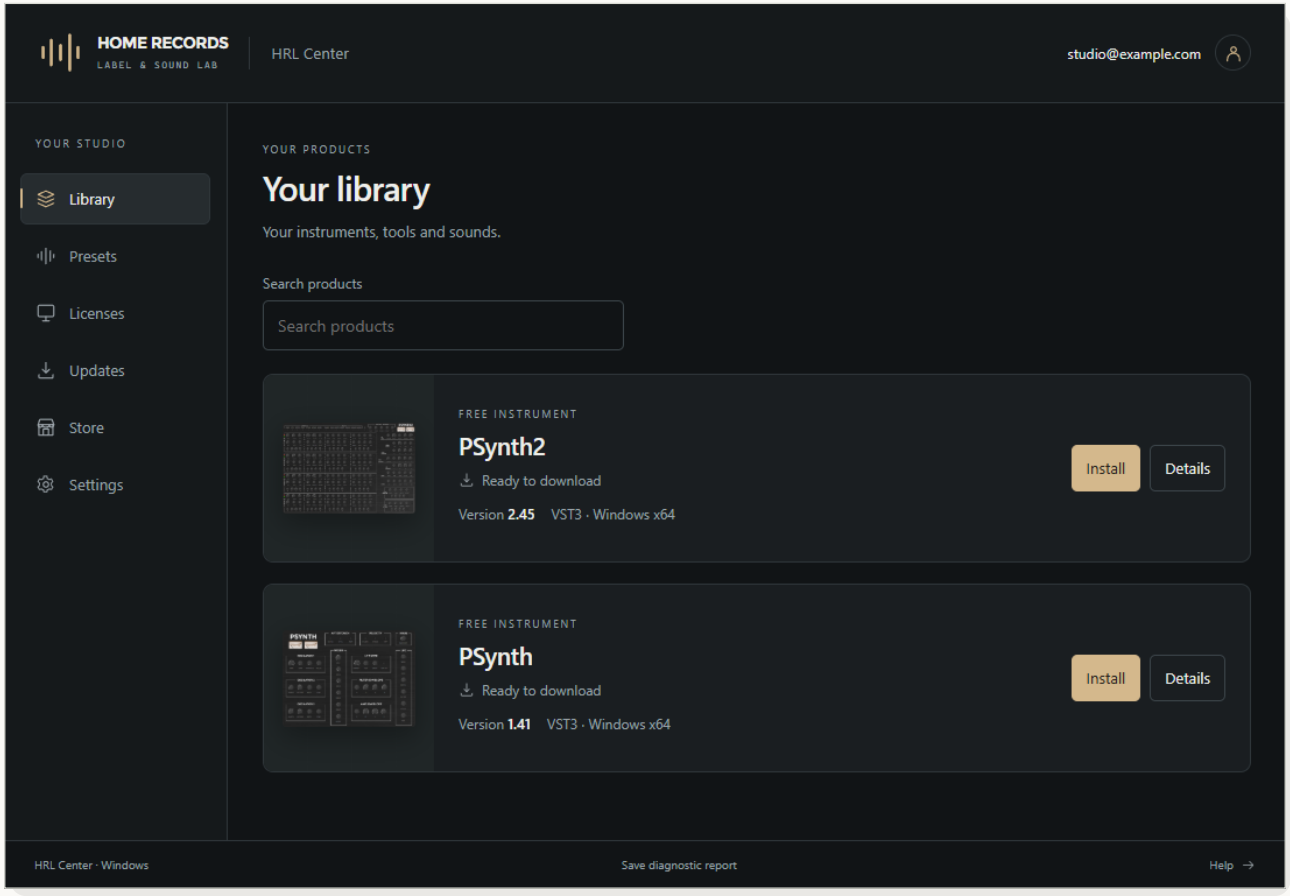

Check the address and spam folder. Use **Change email** to correct the address, or **Resend code** when available. The code expires after **10 minutes** and can be used once. Resends and attempts are limited; if a limit is reached, wait before retrying.

An email sign-in code and a product purchase code have different purposes. Never share either code or a saved session file. An uninvited address cannot use the prelaunch account service.

04 / FIND YOUR PRODUCTS

Everything starts in Library.

See product availability, installation state and version information before you open the details.

04 / Library with the free PSynth2 and PSynth instruments ready to download.

Find it

Use **Search products** to filter by name. Category filters appear when the available catalog has more product types. Clear the search or use **Clear filters** to restore results.

Open it

Choose **Details** for the product page, available actions, resources and technical information. An installed instrument is opened inside your DAW.

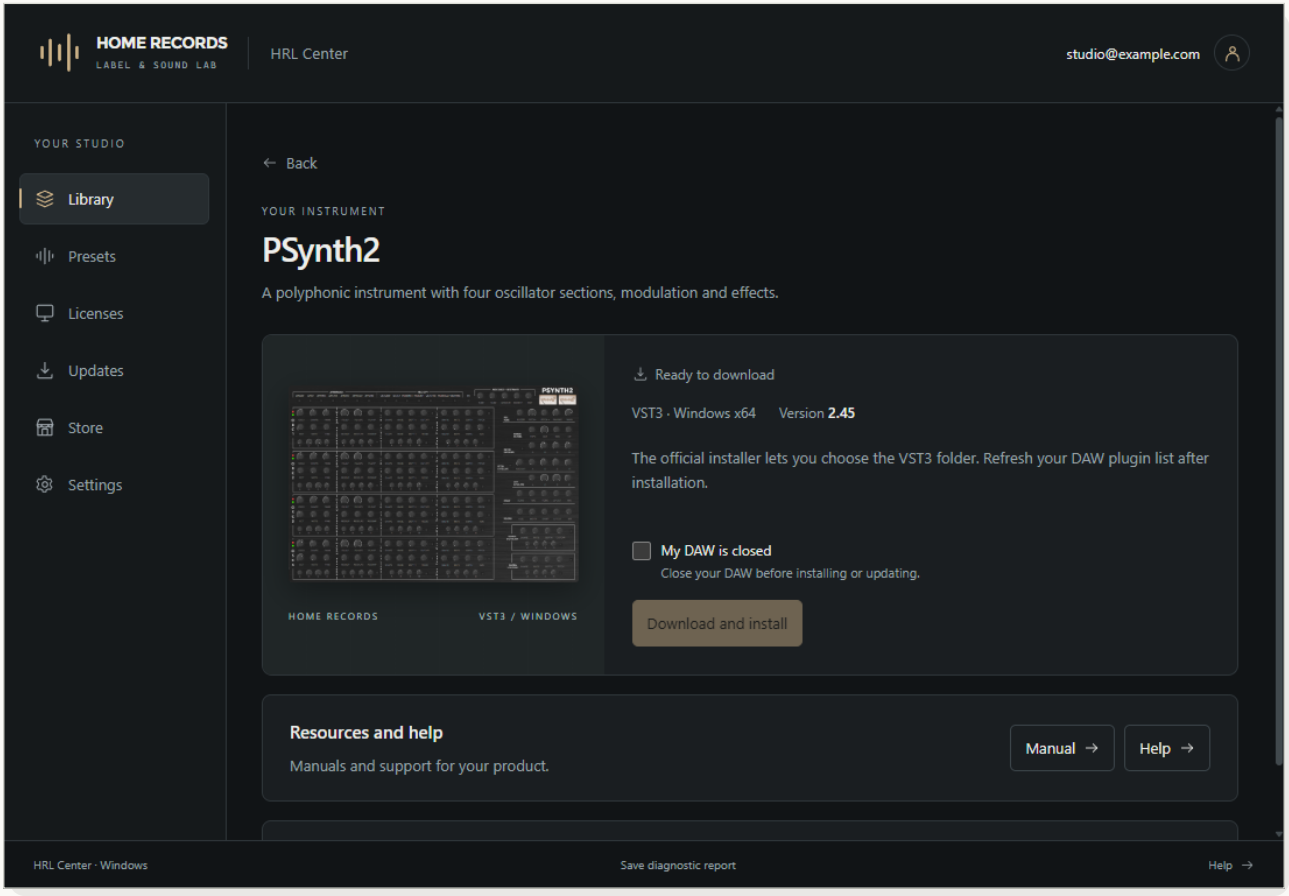

Ready to download means the account can obtain the package. **Installed** means Center detected the product. **Package unavailable** or **No entitlement** indicates a missing package or account right.

Catalog contents depend on your account and release availability. Use Refresh library where offered to recheck them. A product missing during private testing is not evidence that it was removed from a purchase.

05 / DOWNLOAD & INSTALL

From Library to your DAW.

Close your music applications before installing or updating an instrument.

05 / Product details. Download and install becomes available after the DAW confirmation.

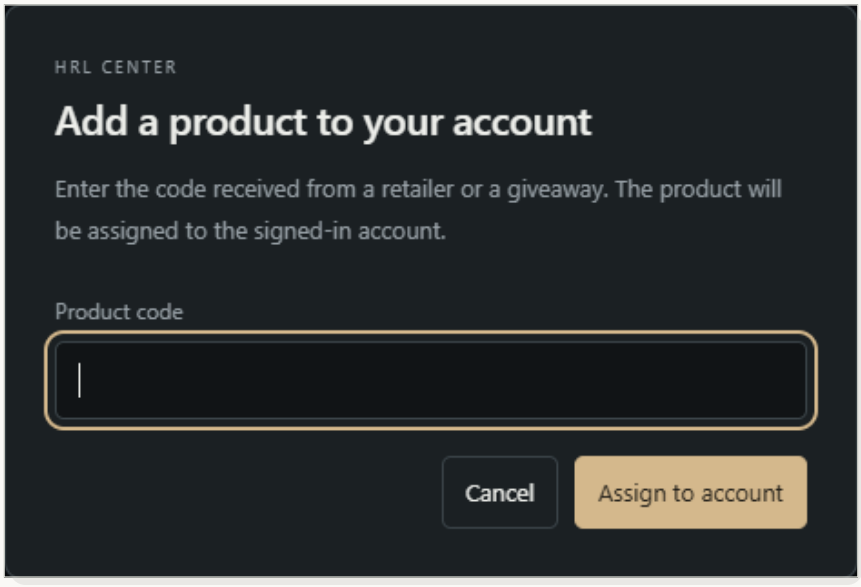

1. Save your project. Close every DAW and any running standalone instance of the instrument. Open **Library > product > Details**.
2. Select **My DAW is closed**, then **Download and install** or **Install update**. Watch the progress; **Cancel download** stops an active transfer.
3. If the native Windows installer opens, complete its wizard. For PSynth and PSynth2, choose the VST3 folder in that wizard. Reopen your DAW and rescan its plugins if required.

> **Let Center confirm the result**
>
> Starting an installer is not the same as a confirmed installation. If Center cannot confirm completion, check the wizard and refresh the library. If verification fails, retry the official download or contact support; do not run the rejected file manually.

06 / PRODUCT OWNERSHIP

Add a product to your account.

A product code assigns ownership to the signed-in account. It is separate from your email sign-in code.

06 / Licenses > Add a product with a code. The code field is intentionally empty.

1. Confirm that you are signed in to the account that should own the product. Open **Licenses** in the sidebar.
2. Choose **Add a product with a code**. Enter the product code supplied with the purchase, retailer order or giveaway. Choose **Assign to account**.
3. After confirmation, return to **Library** and refresh if needed. Download the product when its official package is available.

Stage	Result
Assign to account	The product belongs to this account.
Download and install	The product files are installed on this computer.
Activate here	A supported paid product receives a license for this computer.

> **If a product code is rejected**
>
> Check the code and account. A code used by another account cannot grant a second entitlement. For an owned product, return to Library. If access is missing, contact support with purchase evidence; buying a second copy is unnecessary.

07 / LICENSES & COMPUTERS

Activate once. Create freely.

PSynth and PSynth2 need no activation. PSynth3 has separate account, device and signed-license states.

01
Assign
Product linked to account

02
Install
Instrument files on computer

03
Activate
License on this computer

Activate or refresh PSynth3

1. Sign in to the owning account and open **Licenses**. Confirm the product is assigned. Save your work and close the DAW and PSynth3 standalone.
2. Confirm **My DAW is closed**. Select **Activate here** when available. An assigned product and an available activation service are required.
3. After a successful activation, reopen the PSynth3 instance in your DAW. Native PSynth3 reads the signed local license. Center can then be closed.
4. Use **Refresh license here** to synchronize an active license, or **Advanced > Check license here** to check the local file. Use **Deactivate** to release this device when the service is available.

Trial license

A new PSynth3 trial lasts **3 x 24 hours** and starts by an explicit action in PSynth3. Installing Center, signing in or refreshing Library does not start it. Check the displayed expiry.

Perpetual license

A valid purchase license has no expiry date. PSynth3 supports up to **3 computers**; use the available license controls before moving to another computer.

Understand offline use

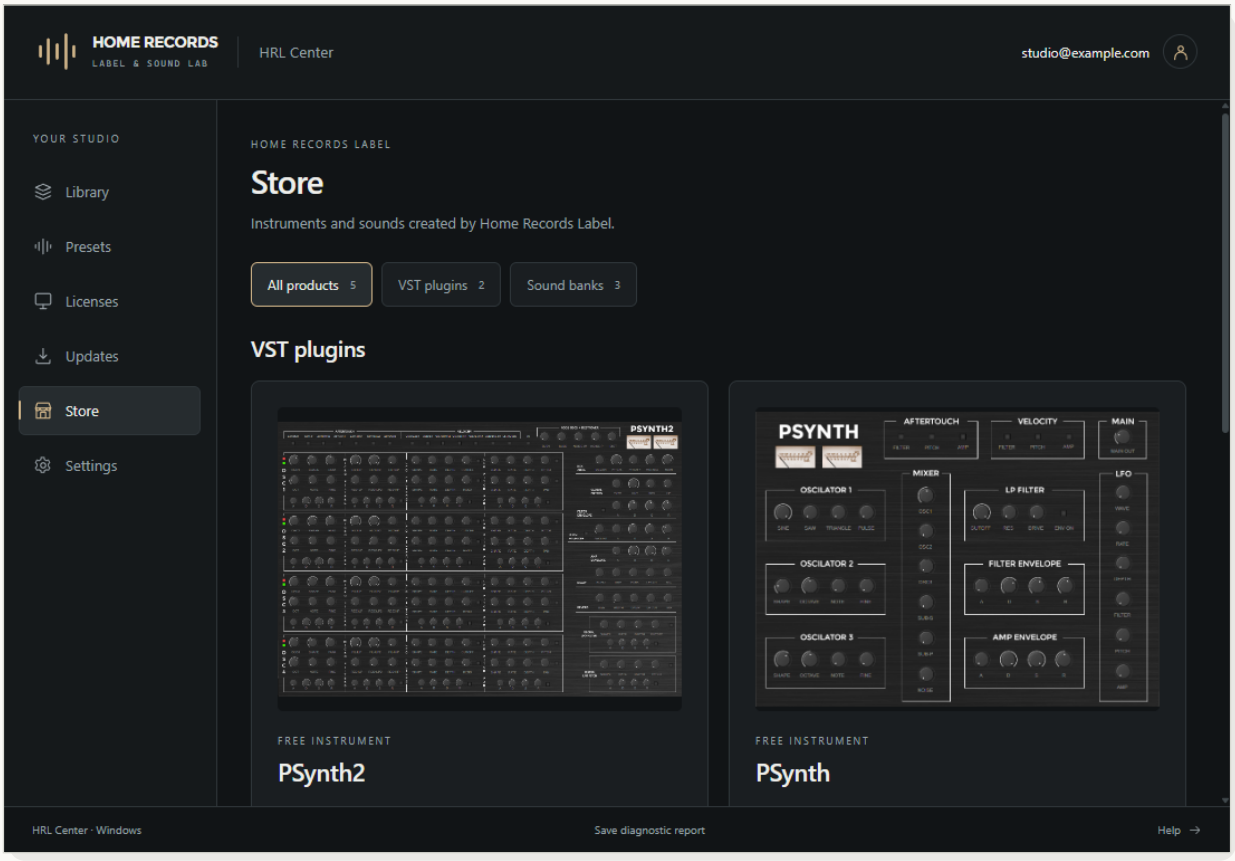

A valid signed PSynth3 license can work offline and after Center sign-out. A remote change reaches a disconnected computer at its next trusted check. Do not manually delete device IDs or license files. A payment receipt or Assigned to account label alone does not activate the computer.

Product and activation controls depend on release availability. Package unavailable or an activation-preparation message means that stage is not open. This manual does not make a private service publicly available.

08 / SOUNDS & DISCOVERY

Find your next sound.

Use Presets for supported library content and Store to explore the official Home Records Label catalog.

07 / Store opens official product information and purchase pages in your browser.

Presets

Available packs show their product dependency and installation state. Install the required instrument first. If this area is empty, use Store; hardware sound packs may be delivered through the link in the purchase confirmation.

Store

Browse the visible categories and open the official product page. Payment takes place on the website. Returning to Center is not, by itself, a purchase or activation confirmation.

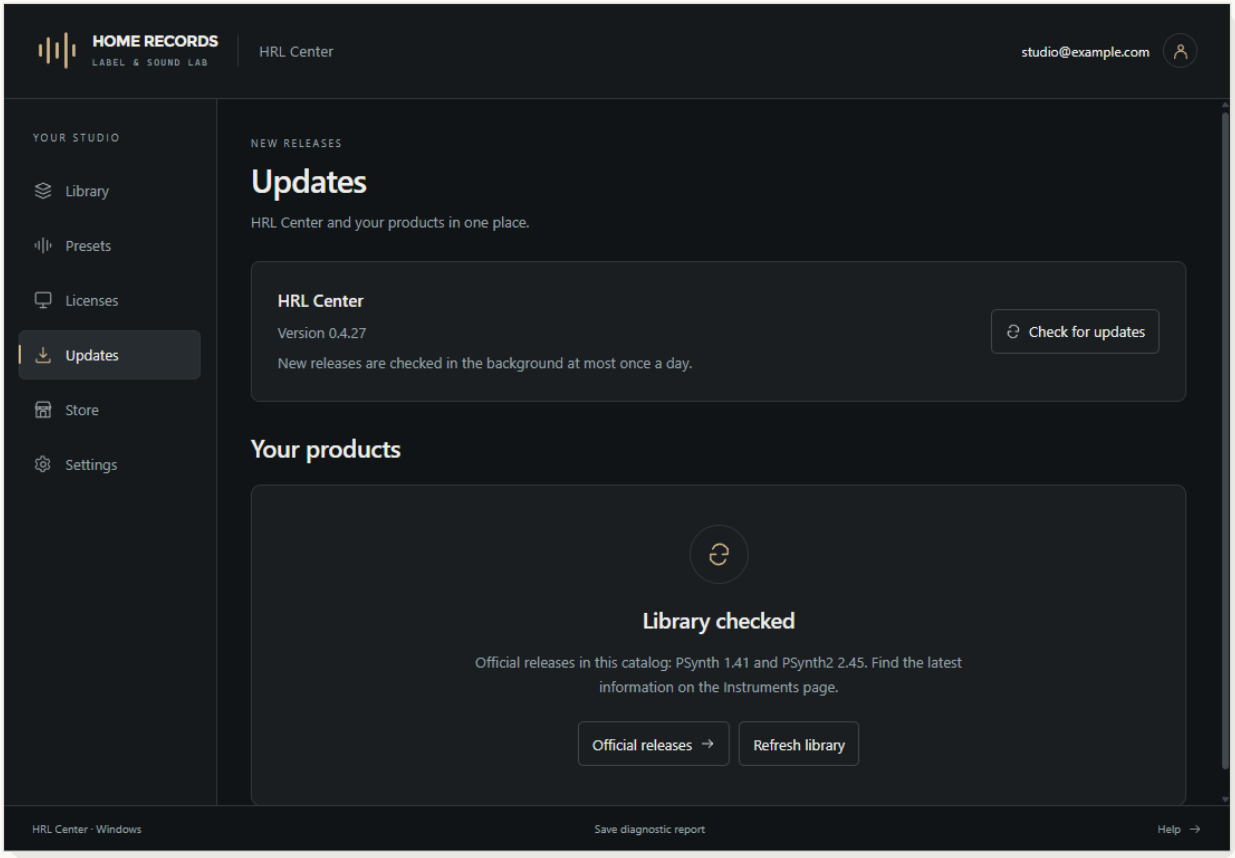

For instrument controls or hardware imports, use the product manual. For PSynth or PSynth2, open **Library > Details > Resources and help > Manual**. Use **Help** on the same page for support.

Not every website sound pack appears in Center. Follow the purchase confirmation and the product's import manual for its delivery route.

09 / KEEP CURRENT

Update with confidence.

Center updates and instrument updates share one view, with separate installation actions.

08 / Updates. The Center panel is separate from the product-release area below it.

HRL Center

Choose **Check for updates**. For an available signed release, use **Download update** then **Install update**. Use **Cancel download** to stop a transfer.

Your instruments

Review versions. Save projects, close the DAW and standalone instrument, select **My DAW is closed**, then **Install update**.

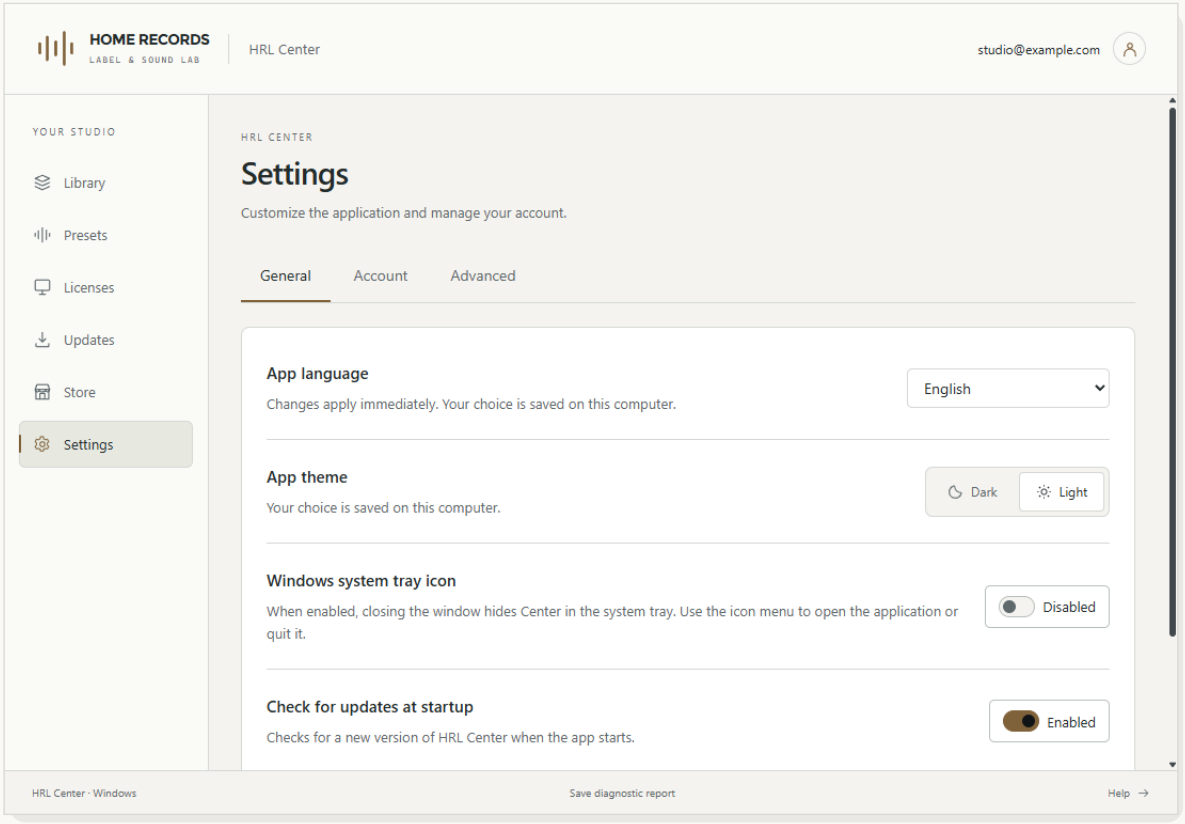

Settings > General > Check for updates at startup controls the startup check. You can check manually from Updates. An unavailable feed does not confirm that your version is the latest.

> **If validation fails**
>
> Center verifies release information and packages before installation. If signature, size or integrity validation fails, retry through Center or contact support. Before release, an unpublished feed means no public update is available.

10 / MAKE IT YOURS

A familiar space, in your language.

Settings > General holds language, appearance and Windows integration preferences.

09 / General settings in the Light theme. Dark and Light share the same controls.

Control	Behavior
App language	Applies immediately and is remembered on this computer.
App theme	Choose Dark or Light. The choice is remembered locally.
Windows system tray icon	On: closing hides Center in the tray; reopen or quit from its menu. Off: closing quits Center.
Check for updates at startup	Enables or disables the Center startup update check.

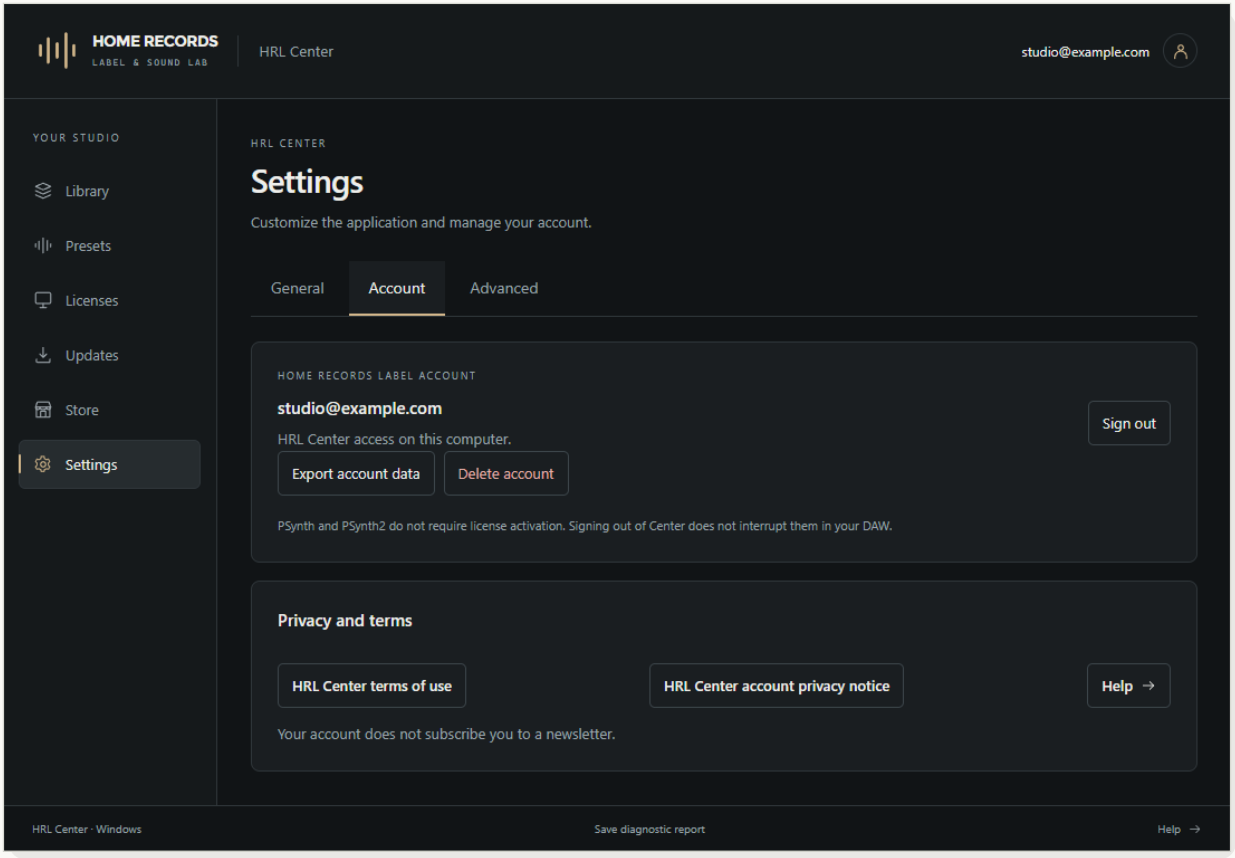

The interface supports **25 languages**: Polish, English, German, Spanish, French, Italian, Portuguese (Brazil), Indonesian, Japanese, Korean, Simplified Chinese, Traditional Chinese, Hindi, Arabic, Russian, Ukrainian, Turkish, Czech, Slovak, Dutch, Romanian, Hungarian, Swedish, Thai and Vietnamese.

Arabic uses right-to-left layout; emails, technical paths and original Polish legal documents remain left-to-right. Changing Center's language does not change an instrument or its installer language.

11 / PRIVACY & DOCUMENTS

Your account. Your choices.

Open Settings > Account to review documents, export account data or sign out.

10 / Account settings with an example account and local privacy controls.

Export account data creates an account export. Store it privately. **Sign out** ends your Center session; it does not interrupt PSynth or PSynth2 in your DAW or disable a valid signed PSynth3 license.

Read the terms and privacy notice in **Privacy and terms**. If Center requests acceptance of a newer version, read the documents and explicitly accept before continuing. Where a translation is labelled a draft pending review, that label applies; the Polish original remains available.

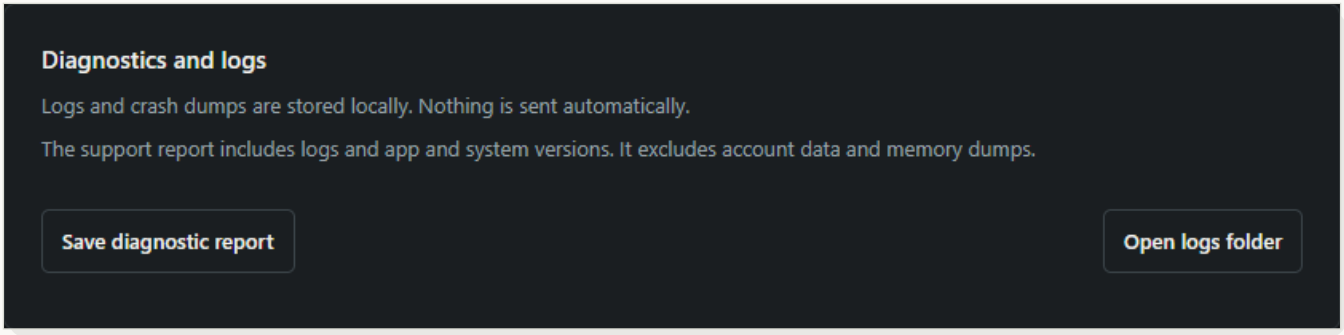

> **Before choosing Delete account**
>
> Deletion requires a recent code sign-in and email confirmation. It removes account access and self-service. It is not a refund or deactivation and does not erase instruments or presets. A valid installed perpetual license may still work offline.

A new account with the same email does not restore old purchases automatically. Use Help with purchase evidence: controlled recovery preserves purchase and device history; email alone is insufficient. An account does not subscribe you to a newsletter.

12 / HELP & DIAGNOSTICS

Get help with useful evidence.

A local diagnostic report helps support investigate Center without requiring your sign-in codes.

11 / Settings > Advanced > Diagnostics and logs.

1. Open **Settings > Advanced > Diagnostics and logs**. Choose **Save diagnostic report** and save the report locally.
2. If needed, choose **Open logs folder** to inspect the locally saved logs. Use **Help** in Center to open the official support page.
3. Describe the action that failed, the exact message and when it happened. Share the report yourself through the support channel agreed for your case.

Include in your request

Center version, Windows version, product name, DAW name and version when relevant, steps to reproduce, and a screenshot of the message. For purchase access, provide evidence through the agreed support channel.

Keep private

Do not share email sign-in codes, product codes, session files or license files. Check screenshots for personal information. Do not send memory-dump files (**.dmp**) without a separate agreement with support.

> **You decide what is shared**
>
> Logs and crash files are saved locally. The ordinary diagnostic report excludes tokens, codes, license files and memory dumps. It is not sent automatically; it remains on your computer until you choose to share it.

Official support

Use the in-app **Help** link or visit homerecordslabel.com/support/. Support can investigate a failed download, account-access issue or missing purchase without you exposing a code publicly.

13 / TROUBLESHOOTING

Find the next useful step.

Start with the visible state or message. Keep projects saved before making installation or license changes.

Situation	What to do
No sign-in email	Check the address and spam folder. Use Resend code when enabled. If the service is restricted, only invited addresses can proceed.
Invalid or expired email code	Use the newest message and enter its 8 digits. Codes are single-use and expire after 10 minutes. Wait if attempts are limited.
Account not found / already exists	Use the offered Create account or Sign in route. Signing in does not automatically create an account.
Reconnect or service unavailable	Check your internet connection and retry later. Do not delete session or license files to force a connection.
A product is missing	Check the account, then refresh Library. Verify code assignment or purchase access. Some products remain private until their release.
A product code is rejected	Check the code and account. If it was used by another account or ownership is unclear, contact support with evidence.
Install or Activate here is disabled	Close the DAW, confirm My DAW is closed and check entitlement, package availability and service readiness.
Download or verification fails	Retry through Center. If it repeats, save a diagnostic report. Do not run a file rejected by verification.
Installed plugin is absent in the DAW	Complete the native installer, check its VST3 location and rescan the DAW. Consult the instrument manual for host-specific setup.
All activation slots are used	Release an existing device through the license controls available to you. If that is not possible, contact support.
PSynth3 trial has expired	Check the license state and expiry. Reinstalling Center or signing in again does not start a new trial.
Center disappears when closed	If the tray option is on, reopen Center from its Windows tray icon. Choose Quit there to end the process.

> **Keep the error message**
>
> If these steps do not resolve the problem, record the exact message and save a diagnostic report before contacting support. A precise report is more useful than repeated reinstallations.

14 / QUICK REFERENCE

Keep the essentials close.

The six areas of Center and the controls you will use most often.

Area	Go here to...
Library	Find products, open Details, download and install.
Presets	Review supported sound packs and instrument dependencies.
Licenses	Add a product code and manage available license controls.
Updates	Check Center releases and update installed products.
Store	Open official product and purchase pages in your browser.
Settings	Set preferences, manage the account and save diagnostics.
